

DoseWise

Medication Safety Assistant

Luis Alfaro & Theresa Green

Why This Matters

Managing multiple medications is confusing

Drug interactions are hard to identify without clinical tools

Existing tools are fragmented or hard to use

Patients rely on long, unreadable drug labels.

What we wanted to build

Simple, user-friendly medication tracker

Surface potential drug interactions

Translate complex drug info into understandable insights

Support non-clinical users

DoseWise

Add and manage medications

View drug label information

Detect potential interactions

Highlight risks clearly

Medication Dashboard

Log Out

Track medications, review label highlights, and stay on top of safety details.

WELCOME

Jane Doe

Add a favorite pharmacy and profile details for a more personalized experience.

How it Works

FHIR Integration

Uses HL7 International FHIR
R4 structure

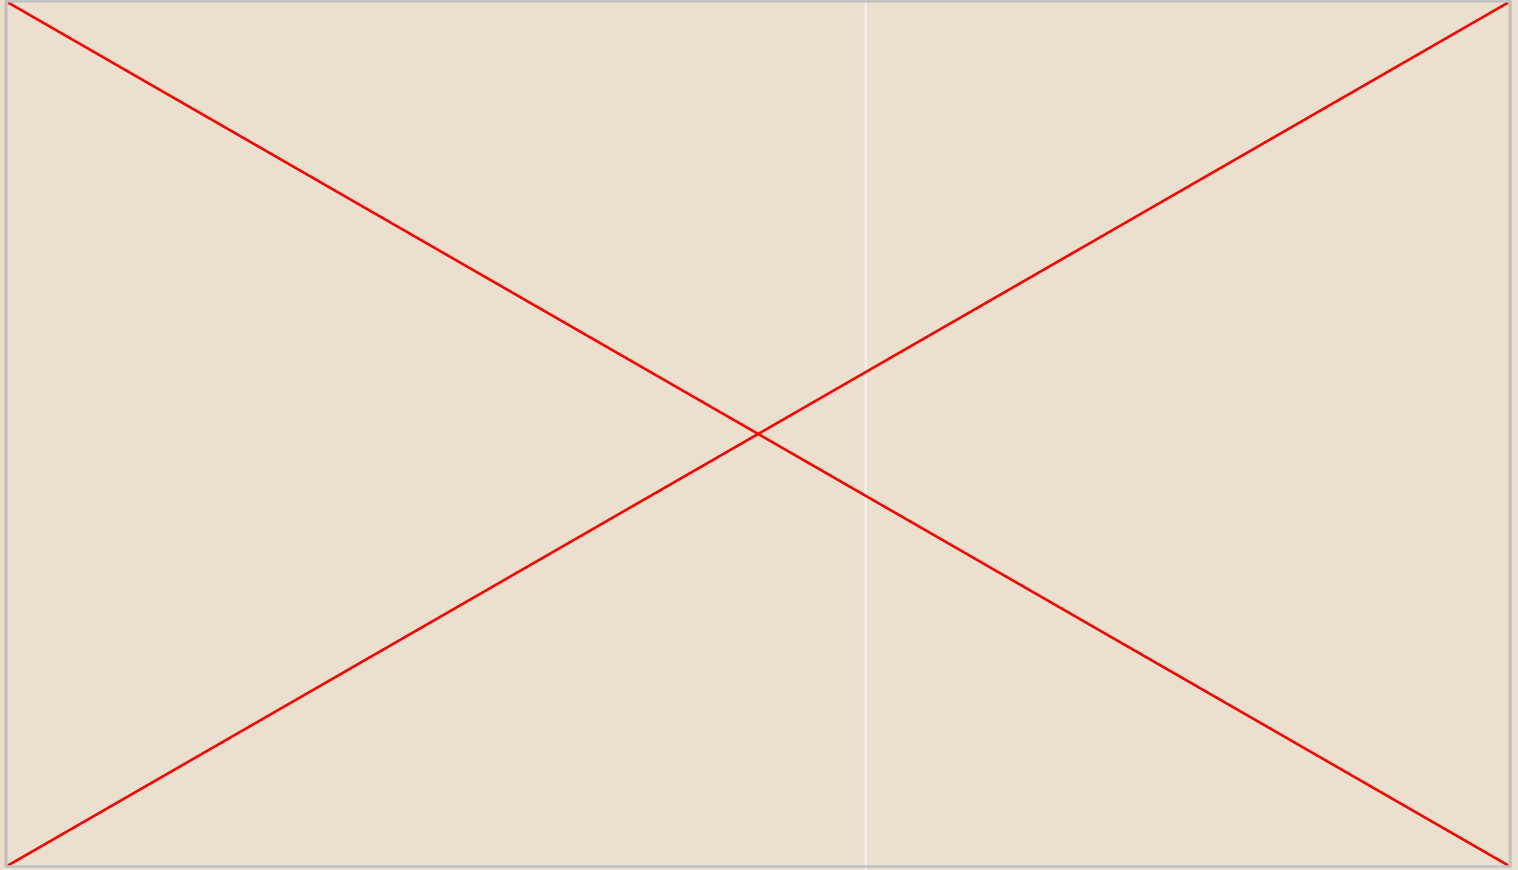

Resources:

- MedicationRequest
- Patient

Standardized format for
interoperability

```
{
  "fhirBundle": {
    "entry": [
      {
        "fullUrl": "MedicationRequest/2",
        "resource": {
          "dosageInstruction": [
            {
              "text": "10 mg once a day"
            }
          ],
          "id": "2",
          "intent": "order",
          "medicationCodeableConcept": {
            "coding": [
              {
                "code": "84815",
```

Demo

Challenges

OpenFDA

- Public Medication Data
- Drug Label Data

- Allergy Checks
- Schedule Tracking

Future Work

Easier to read labels

Clinical drug interaction database

Medication notification support

Timing and Spacing Alerts

Team Contributions

Luis Alfaro

- Full Stack development and System Integration
- Flask Backend, SQLite database, and JWT authentication
- Railways Deployment, FHIR Patient Sync

Theresa Green

- Research
- OpenFDA Integration
- UX and Layout
- Front/Backend Development

Thank you!
